

CEQA Mitigation for Construction Emissions Workshop

The Air District staff invites lead agencies, developers, consultants, and construction companies to discuss the Air District's recommended CEQA mitigation for construction emissions.

The current recommended mitigation has been in place in Sacramento County since the late 1990s. Air District staff conducted a review of the construction mitigation program and held workshops on potential new mitigation language with various groups in April. Based on feedback received, Air District staff drafted new language to present and discuss with stakeholders.

Workshop date, time, and location:

December 19, 2018 @ 1:30 p.m.
777 12th Street, 3rd Floor, Sacramento, CA 95814

If requested, the Air District will provide a conference call option for the meeting.

Please direct your questions on the workshop to Karen Huss at 916-874-4881 or khuss@airquality.org.
