9AM WEATHER FORECAST FILE AND SERVICES

The 9am weather forecast file will be issued each day of the Fall Burn Program and include:

- 1. Valley Weather Synopsis – Updated:** Example above, format similar to 8 AM synopsis
- 2. Today’s Forecast Surface Wind flow Pattern referencing east and west sides and eddy: Example:**
 Winds at 8AM across the valley were very light and trending primarily southerly, with of course some variability and a hint of northerly in spots along the west side of the valley. This trend should continue through the morning, but by midday expect light southerlies to be reasonably well organized throughout the valley, but remaining <10 mph. Pressure gradients are weak though, thus still expect some variability due to local heating effects.
- 3. Today’s Forecast Transport Winds referencing Buttes, profilers and pressure gradient: Example:**

Transport winds are also weak, but do appear to be fairly well consistent out of the south (Sutter Buttes SSW at 2-5 mph for the past 3 hours, Chico profiler SE 5-10 mph, Sacramento SW 10-15 mph). Expect transport winds to remain southerly 5-10 mph through the burn hours today.

4. Basin Stability/Inversion Discussion referencing temperatures, NvsS & mixing depth: Example:

The radiational inversions which formed across the valley overnight are again fairly weak, although are slightly stronger than yesterday morning. The cool layer of air within this inversion is quite humid, with relative humidity levels in the 80-90% range at 8am. With ample sunshine expect ground based inversions to dissipate between 11am and noon, with noon mixing depth expansion to near 1500 feet. Afternoon mixing depth expansion and dispersion across the valley will be fair to good, with peak mixing depths around 2500 feet as surface highs reach mainly into the lower 80s.

5. Cautionary Notes referencing morning inversion, fog, fuel moisture and wind shifts: Example:

It is best to wait until noon before burning to allow morning inversions to dissipate and for the lower atmosphere to "dry" out some. High relative humidity levels this morning (70-90%) - conducive to haze formation, not to mention dew on the local rice stubble. Overall, dispersion conditions today will be a little worse than yesterday.

6. Zone ventilation ratings: Example:

Butte, 2, 2, 2
Colusa, 2, 3, 3, 3
Glenn, 3, 3, 3, 2
Placer, 2, 2, 1
Sacramento, 1, 1, 1

2. Comments on inversion strength and time inversion will break
3. Pre-storm consultation and recorded messages as necessary

Spring Burn Program The start and end of the program will be determined by weather conditions and burning demands. The daily file will include:
