## Background of the Air Toxics “Hot Spots” Program

### Overview

---

#### Introduction

The Air Toxics “Hot Spots” Information and Assessment Act of 1987 establishes a statewide program to:

- inventory routine toxic air emissions from individual facilities
- assess health risks from these toxic air emissions
- notify the affected public of these toxic air emissions and their potential health risks
- reduce the toxic air emissions to the affected public

---

#### In This Section

This section is divided into the following parts:

- Requirements of the Air Toxics “Hot Spots” Program .....Page 1
- District Assistance to Facilities.....Page 2

### Requirements of the Air Toxics “Hot Spots” Program

---

#### Annual Report Required

The Act requires districts to prepare and publish an annual report that:

- describes the priorities and categorizes the results and progress of the health risk assessment program
- ranks and identifies facilities according to cancer risk
- identifies facilities that expose individuals to any chronic and acute health risk
- describes the status of the development of control measures to reduce emissions of toxic air pollutants, if any
- disseminates the annual report to county boards of supervisors, city councils, and local health officers

---

#### Public Hearing Required

- The District board is required to hold a public hearing to present the report and discuss its content and significance.

**Requirements of Facilities**

---

The Act requires facilities meeting certain criteria to:

- prepare emission inventory plans
- prepare emission inventory reports quantifying toxic air emissions
- prepare and submit health risk assessments to the District
- notify all individuals who are exposed to “significant health risks” in accordance with a procedure specified by the District
- prepare and submit a plan to reduce toxic emissions
- reduce the toxic air emissions in accordance with the plan

**Requirements of Districts**

---

The Act requires facilities meeting certain criteria to:

- review and approve emission inventory plans
- review and approve emission inventory reports
- submit the emission inventory reports to the California Air Resources Board (CARB) for inclusion in the statewide Air Toxic Emission Data System
- review and approve health risk assessments taking into account comments of Cal-EPA Office of Environmental Health Hazard Assessment (OEHHA)
- designate significant risk levels and determine which facilities must notify the public
- review and approve the risk reduction audits and plans

**District Assistance to Facilities**

**District Assistance**

---

The District assisted facilities in complying with this complex legislation by doing the following:

- provided support and guidance for facilities, supplying them with emission factors and other information to aid them in completing their plans and reports
- assisted facilities in completing their emission inventory plans and reports
- provided support and guidance for facilities in using CARB’s Hotspots Analysis Reporting Program (HARP)

This assistance continues with the submittal of new and updated plans and reports.

# Section 2

## Changes to the Air Toxics “Hot Spots” Program

### Overview

#### Introduction

---

One of the main goals of the Air Toxics “Hot Spots” Program is to inventory toxic air emissions from facilities and identify those facilities that may pose a risk to the public. Until the passage of AB 564 in September 1996, many facilities remained in the Air Toxics Hot Spots Program even though the health risk these facilities posed to the public, or were likely to pose to the public, was insignificant. The passage of AB 564 changed state law governing the Air Toxics Hot Spots Program to eliminate the burden of complying with the Program for those facilities whose toxic air emissions are insignificant.

#### In This Section

---

This section covers the changes to the program:

- Legislative Changes .....Page 4
- Fee Changes.....Page 4
- New Facility Categories.....Page 8
- Exempt Facilities .....Page 9
- Risk Assessment Changes.....Page 11

## Legislative Changes

### Amendments to the “Hot Spots” Act Since 2007

---

Effective January 1, 1997, the Air Toxics Hot Spots Program was amended to eliminate the burden of complying with the Program for those facilities whose toxic air emissions are insignificant.

As of August 27, 2007, amendments to incorporate diesel PM (particulate matter) were added to CARB’s *Emission Inventory Criteria and Guidelines for the Air Toxics “Hot Spots” Program* (“Hot Spots” Guidelines), incorporated by reference in title 17, California Code of Regulations (CCR), section 93300.5.

The 2007 amendments included:

- general reporting requirements for diesel engines
- reporting requirements for some agricultural diesel engines beginning in 2012
- reporting requirements for stationary emergency standby diesel engines that will be retrofitted, replaced, or removed from service at a hospital building subject to the Alquist Hospital Facilities Seismic Safety Act of 1983, beginning in 2012
- reporting requirements for diesel engines of any size, beginning in 2010.

## Fee Changes

### Program Costs Recovery Options

---

Health and Safety Code, Section 44380 requires a district to recover:

- its program costs, and
- the district’s portion of the State’s program costs

Section 44380 also requires a district to:

- impose fees on facility operators that are proportionate to the amount of toxic air emissions and the priority assigned to the facility

A district may recover these costs by either:

- adopting a fee rule (SMAQMD’s choice), or
- choosing to have district fee schedules established in the State’s Fee Regulation

**Fee Changes**

---

In response to the passage of AB 564, the District changed its fee structure in FY96-97.

The change in fee structure provides:

- flexibility as to how the fees are distributed:
  - fees are primarily based on the health risk posed by the facility
  - fees are secondarily based on the complexity of the facility's toxic-emitting processes
  
- flexibility in categorizing facilities, for which the District created seven major categories:
  - five major categories based on health risk
  - one category for industrywide facilities
  - one category for unprioritized facilities

**Fee Structure**

---

Fees are assessed based on the health risk posed by the facility and the number of different processes at the facility.

**Fee Categories**

---

Depending on the potential health risk to the public associated with the toxic air emissions from the facility, the facility will fall under one of the following reporting categories:

FEE CATEGORY	DESCRIPTION
1	Industrywide
2	Unprioritized
3	Health Risk Assessment (HRA) $\geq 1$ to $<10$ in a million excess cancer risk, or Hazard Index (HI) $\geq 0.1$ to $\leq 1$
4	Priority score $>10$ and no HRA
5	HRA $\geq 10$ to $<50$ in a million excess cancer risk, or HI $>1$
6	HRA $\geq 50$ in a million excess cancer risk
4YRS	Priority score $\leq 10$ and subject to update reporting every four years.

**Fee Category 1**

---

An industrywide facility, which includes retail gas stations, dry cleaners, chrome platers, and facilities with diesel internal combustion engines.

Based on the previous 2016 review period, there are 1,217 facilities in this category, organized as follows (Appendix C – AB2588 Industrywide Screening Health Risk Assessment Results):

Industrywide Category	Number of Facilities
Retail Gas Stations	354
Dry Cleaners	1
Chrome Platers	3
Diesel Internal Combustion Engines	859

**Fee Category 2**

---

A facility included in the program whose emissions have not yet been prioritized or otherwise evaluated.

There are 15 facilities in this category, based on the current 2017 review period:

- B & J Dairy
- Cal Denier Dairy
- Granite Construction Co. (4001 Bradshaw Road)
- L and D Landfill
- Lopez Agricultural Services
- New Hope Dairy LLC
- Sacramento City Landfill
- Sacramento Regional County Sanitation District
- Sacramento Rendering Company
- Siemens Industry, Inc
- Silgan Can Company
- SMUD Cosumnes Power Plant
- Vintage Production California (Baby Brannon)
- Vintage Production California (Big Brannon)
- West Coast Grape Farming

---

**Fee Category 3**

A facility that has a health risk assessment cancer risk greater than or equal to 1 in a million and less than 10 in a million, or a non-cancer Hazard Index (HI) greater than or equal to 0.1 and less than or equal to 1.

There are 6 facilities in this category:

- A. Teichert & Son (Perkins Plant)
- Blue Diamond Growers
- Mercy General Hospital
- Mitsubishi Rayon Carbon Fiber & Composites (*formerly Grafil Inc.*)
- SFPP, LP
- UCD Medical Center

---

**Fee Category 4**

A facility that has a priority score greater than 10 and does not have an approved health risk assessment.

There are 5 facilities in this category:

- Carson Cogeneration
- Huhtamaki, Inc.
- Procter & Gamble
- Sacramento Cogeneration Authority
- Sacramento Power Authority

---

**Fee Category 5**

A facility that has a health risk assessment cancer risk greater than or equal to 10 in a million but less than 50 in a million, or a hazard index greater than 1.

There are no facilities in this category.

---

**Fee Category 6**

A facility that has a health risk assessment cancer risk greater than or equal to 50 in a million.

There are no facilities in this category.

---

**Fee Category  
SMAQMD Rule 306,  
Section 301.2**

A facility that has a priority score less than or equal to 10.

There are 5 facilities in this category:

- Bimbo Bakeries USA (*formerly Earthgrains*)
- Chevron USA
- Consolidated Fabricators
- D & T Fiberglass
- Kiefer Landfill

## **Exempt Facilities**

---

A facility that has a priority score less than or equal to 1 for cancer effects and non-cancer health effects, or a facility that has a health risk assessment cancer risk less than 1 in a million and a non-cancer hazard index less than 0.1.

These facilities are exempt from fees and update reporting. See the Exempt Facilities section for additional categories.

There are 3 facilities in this category:

- A. Teichert & Son (Grantline Plant)
- Granite Construction Co. (4291 Bradshaw Road)
- Triangle Rock Products, Inc.

## **New Facility Categories**

### **Facilities Added**

---

As of August 27, 2007, diesel internal combustion engine reporting requirements were added to the “Hot Spots” Guidelines, after CARB’s 1998 identification of diesel PM as a toxic air contaminant and as part of an alignment with the Airborne Toxic Control Measure for Stationary Compression Ignition Engines reporting requirements.

A facility with a diesel engine is subject to the reporting requirements if the facility meets one of the following criteria:

- The facility operates any number of diesel engines for more than 20 hours/year combined for non-emergency operations; and
- The use of any number of diesel engines is part of the routine and predictable facility operation; or
- The diesel engine is stationary. The district may include portable engines in this program if the routine and predictable emissions have the potential to pose a significant risk, but is currently not including on-road engines and off-road engines in this program.

The District must submit to CARB the list of facilities with diesel engines and their risk assessment scores and status in the Hot Spots Program during the annual update reporting.

## Exempt Facilities

### Exempt from Reporting

---

Certain low priority facilities are exempt from update reporting. These facilities include:

- Facilities with a prioritization score less than or equal to 1 for cancer health effects and less than or equal to 1 for non-cancer health effects (provided the facility does not emit more than 5 tons/year of a single HAP or 12.5 tons/year of total HAPs), or
- Facilities with a district-approved health risk assessment that shows a total potential cancer risk at an actual receptor of less than 1 excess cancer case per one million persons and a total hazard index (HI) for each toxicological endpoint of less than 0.1, or
- Facilities where the primary activity falls into one of the following classes and the facility meets specified criteria:
  - a printing facility that uses an annual average of two gallons/day or less (or 17 pounds/day or less) of all graphic arts materials (deducting the amount of any water or acetone)
  - a wastewater treatment plant that does not have a sludge incinerator, if the facility's maximum throughput does not exceed 10 million gallons/day
  - a crematorium for humans or animals that uses only propane or natural gas fuel, if the facility annually cremates no more than 300 human bodies or 43,200 pounds of remains (human or animal)
  - a boat or ship building and repair facility if the facility uses 20 gallons/year or less of coatings or is a coating operation using only hand-held nonrefillable aerosol cans
  - a hospital or veterinary clinic that complies with the control requirements specified in the Ethylene Oxide Airborne Toxic Control Measure for Sterilizers and Aerators, provided the facility either (i) has an annual usage of ethylene oxide of less than 100 pounds/year if housed in a single story building, or (ii) has an annual usage of ethylene oxide of less than 600 pounds/year if housed in a multi-story building
- The district may opt to exempt a facility that was not required to conduct a risk assessment and that has a prioritization score greater than 1, if a conservative screening health risk assessment is performed that shows the facility's excess potential cancer risk is less than one case per one million persons and the total hazard index for each toxicological endpoint is less than 0.1.

## Appendix E Exemptions

---

Certain classes of facilities emitting less than 10 tons/year of criteria pollutants and listed in Appendix E of the Hot Spots Guidelines are exempted from the program if established use thresholds are not exceeded.

These include:

- Facilities using less than 55 gallons/year of carcinogenic or 55 gallons/month of non-carcinogenic degreasing solvents.
- Facilities emitting less than 85 pounds/year of 1,4 Dioxane (can apply to 1,1,1 trichloroethane degreasers).
- Facilities using less than 4 pounds/year of ethylene oxide in sterilizers.
- Facilities that comply with the Ethylene Oxide Airborne Toxic Control Measure for Sterilizers and Aerators and use less than 100 pounds/year of ethylene oxide in a single story building, or less than 600 pounds/year of ethylene oxide if used in a multi-story building.
- Crematories cremating less than 300 human bodies per year or 43,200 pounds/year of remains (human or animal).
- Facilities emitting less than 1,000 pounds/year of styrene or styrene compounds (including fiberglass fabricators).
- Facilities using less than 2 gallons/day (or 17 pounds/day) of printing chemicals minus water and acetone.
- Boat and ship building/repair facilities using less than 20 gallons/year of coatings (excluding aerosol spray cans).
- Wastewater treatment plants with throughputs less than 10 million gallons/day, if they do not have sludge incinerators.

## Risk Assessment Changes

---

### Risk Assessment Changes

OEHHA is required to develop guidelines for conducting health risk assessments under the Air Toxics Hot Spots Program (Health and Safety Code Section 44360(b)(2)). The original guidelines were adopted by OEHHA in 2003 as a compilation of information presented in four Technical Support Documents (TSDs) adopted between 1999 and 2003.

In 1999, the legislature passed the Children's Health Protection Act of 1999 (SB 25, Escuita, Chapter 731, Statutes of 1999). The Act required OEHHA to ensure infants and children are explicitly addressed in assessing risk. This necessitated revisions to the methods for both noncancer and cancer risk assessment and to the exposure variates. The following TSDs were adopted to update and replace the original methodologies.

- TSD for the Derivation of Noncancer Reference Exposure Levels (June, 2008);
- TSD for Cancer Potency Factors (May, 2009); and
- TSD for Exposure Assessment and Stochastic Analysis (June, 2012)

These TSDs underwent public and peer review, were approved by the State's Scientific Review Panel on Toxic Air Contaminants, and were adopted by OEHHA for use in the Air Toxics Hot Spots program. The Air Toxics Hot Spots Program Risk Assessment Guidelines: Guidance Manual for the Preparation of Health Risk Assessments (February 2015, 2015 OEHHA Guidelines) combines the critical information from the three TSDs into a manual for the preparation of health risk assessments.

ARB and CAPCOA assessed the impacts of the 2015 OEHHA Guidelines and determined that risk estimates could increase approximately 1.5 to 3 times compared to estimates under the 2003 OEHHA Guidelines. In response, ARB and CAPCOA developed the ARB/CAPCOA Risk Management Guidance for Stationary Sources of Air Toxics (July 2015, 2015 ARB/CAPCOA Guidance). ARB officially adopted the guidance on July 23, 2015.

The District adopted revised prioritization guidelines and health risk analysis guidelines in March 2016 to implement the 2015 OEHHA and 2015 ARB/CAPCOA Guidance as part of the Hot Spots Program. To assess the impacts of the 2015 OEHHA Guidelines, the District requested revised 2016 inventories from existing core facilities and re-prioritized these facilities under the revised guidelines.

# Section 3

## Air Toxics Hot Spots Risks

### Overview

#### Introduction

---

One of the main goals of the Air Toxics Hot Spots Program is to identify facilities whose emissions may pose a risk, assessing the health risks associated with individual facilities and, if this risk is considered significant, the dissemination of this information to the affected public and the imposition of risk reduction plans to reduce the facility's risk below the significance level over the next 5-10 years.

#### In This Section

---

This section covers the elements used to assess the potential health risks and inform the public of the results:

- Prioritization for Risk Assessment .....Page 12
- Risk Assessment Review ..... Page 15
- Air Toxics Health Risks.....Page 16
- Risk Assessment Results Requiring Notification .....Page 18
- Public Notification Requirements.....Page 18
- Risk Reduction Audits and Plans (SB 1731) .....Page 20

### Prioritization for Risk Assessment

#### Introduction

---

As toxic air emissions reports are received by the District, the facilities are prioritized to determine which facilities must perform a health risk assessment. The risk prioritization process does not prioritize facilities according to risk (since that is not known at this stage), but instead prioritizes facilities based on factors indicating the facility's relative potential to exceed significant risk levels.

## Factors Used In Prioritization Procedures

---

The District developed prioritization procedures that consider the following factors:

- potency of the facility's carcinogenic toxic air emissions
- toxicity of the facility's non-carcinogenic toxic air emissions
- mass of the facility's toxic air emissions
- any additional factors the District determines to be significant

These procedures were originally approved by the Sacramento Metropolitan Air Quality Management District (SMAQMD) Board of Directors on January 29, 1991 and revisions were approved on March 24, 2016 to incorporate the 2015 OEHHA guidelines changes.

## Ranking

---

Facilities are ranked and placed into one of three priority groups:

- high (priority score  $\geq 10.0$ )
- intermediate (priority score  $\geq 1.0$  and  $< 10.0$ )
- low (priority score  $< 1.0$ )

## High Priority

---

A facility's designation of "high priority" **does not** necessarily indicate high risk, only that the District needs more information about the facility, such as:

- the proximity of the facility's toxic air emissions points to potential receptors including, but not limited to, worksites, residences, hospitals, schools, and daycare centers
- how wind direction and wind speed affect the concentrations of the toxic air emissions
- how the combined effect of the facility's toxic air emissions may affect those people nearby

The facilities categorized as high priority are required to submit health risk assessments to the District within 150 days of being placed into the high priority category.

**High  
Priority  
Facilities**

---

10 facilities were notified that they had been designated high priority and were required to perform health risk assessments. These facilities have submitted health risk assessments that were reviewed by the District and the Cal-EPA Office of Environmental Health Hazard Assessment (OEHHA).

The high priority facilities are:

- A. Teichert & Son (Perkins Plant)
- Blue Diamond Growers
- Carson Cogeneration
- Huhtamaki, Inc.
- Mitsubishi Rayon Carbon Fiber & Composites (*formerly Grafil Inc.*)
- Procter & Gamble
- Sacramento Cogeneration Authority
- Sacramento Power Authority
- SFPP, LP
- UCD Medical Center

**Intermediate  
Priority**

---

6 facilities were notified that they had been designated intermediate priority. Based on their past inclusion in the program, these facilities continued on their 4-year update schedule and were not required to submit health risk assessments under the Air Toxics Hot Spots Program, unless new information becomes available that suggests the need to reevaluate a facility.

The intermediate priority facilities are:

- Bimbo Bakeries USA (*formerly Earthgrains*)
- Chevron USA
- Consolidated Fabricators
- D & T Fiberglass
- Kiefer Landfill
- Mercy General Hospital

**Low  
Priority**

---

3 facilities were notified that they had been designated low priority and were exempted from the Air Toxics Hot Spots Program, unless new information becomes available that suggests the need to reevaluate a facility.

The low priority facilities are:

- A. Teichert & Son (Grantline Plant)
- Granite Construction Co. (4291 Bradshaw Road)
- Triangle Rock Products, Inc.

**Prioritization  
List**

---

The current prioritization list of facilities in their designated category is listed in Appendix A – AB2588 Prioritization Scores.

**Reducing  
Prioritization  
Scores**

---

All facilities are encouraged to lower their prioritization score by implementing toxic air emission reduction measures such as:

- adding emissions control equipment
- making product changes to use less toxic materials
- eliminating processes that have toxic air emissions

## **Risk Assessment Review**

**Definition**

---

A health risk assessment, for the purpose of this program, is an evaluation of the potential adverse health effects that **may** result from exposure to routine toxic air emissions. The assumptions used in the Hot Spots risk assessments are designed to err on the side of health protection and are very conservative.

**Risk  
Assessment  
Process**

---

After a facility is notified of the requirement to perform a risk assessment:

- within 45 days of the written notification, it must submit a risk assessment protocol if the facility does not want to use the OEHHA HRA Guidelines
- within 150 days of written notification, it must submit the completed health risk assessment, which will then be reviewed by the District and OEHHA

**Risk Assessment Includes**

---

The review of the completed risk assessment includes, but is not limited to the following areas:

- types of computer dispersion models used
- type of modeling grid used
- meteorological (weather) data used
- emission point designations (area and point sources)
- source aggregation
- inhalation exposure
- multi-pathway (non-inhalation) exposure
- deposition values
- receptors
- toxic air substances and emission amounts used
- references to be used
- accuracy of the amounts of the toxic air emissions used compared to the facility's emission inventory report

**Health Risk Assessment Results**

---

The results of all health risk assessments that have been submitted to the District are listed in Appendix B – AB2588 Health Risk Assessment Results.

## **Air Toxics Health Risks**

**Introduction**

---

There are two categories of risk that are determined by a health risk assessment. These are cancer and non-cancer health risks. Risks for each are determined using different calculations and “rated” differently.

**Cancer Risk Definition**

---

Maximum individual cancer risk is defined as the added statistical risk of an individual contracting cancer when exposed to a facility's toxic air emissions over a lifetime. This term does not imply cancer fatalities.

**Note: This is risk over and above any existing risk from the background levels of toxics. The background level of risk in the Sacramento area has been calculated to be 680 in a million (as estimated by CAPCOA in their July 23, 2015 Risk Management Guidance: <http://www.capcoa.org/wp-content/uploads/2016/04/Risk%20Management%20Guidance%20for%20Stationary%20Sources%20of%20Air%20Toxics%207.23.2015.pdf>&ie=&oe=).**

---

**Maximum Risk**

As the term “maximum risk” implies, this estimate is conservative. In areas of uncertainty, assumptions are made that tend to overestimate rather than underestimate risk. Therefore, it is unlikely that the risk would be higher than this estimate.

---

**Examples of Assumptions**

The following are some of the assumptions used in a risk assessment:

- The current guidelines assume different breathing rates for different age groups, to account for higher breathing rates for infants and young children.
- Residential receptors are assumed to be located at their residence for a 30-year exposure duration beginning at the third trimester. Worker receptors are assumed to work at the same location and be exposed for a duration of 25 years beginning at age 16.
- Residential receptors are assumed to spend a fraction of time at home, depending on age. Young children are assumed to spend more time at home, while adults spend less.

**Note: In the risk assessments performed for the Air Toxics Hot Spots Act process, the maximum individual cancer risk is calculated for the most exposed individual in the nearby residential area and in a nearby commercial/industrial area.**

---

**Non-Cancer Risk Defined**

A non-cancer risk is defined as the risk of an adverse health effect, other than cancer, which may result from exposure to toxic air emissions. This risk is measured by the Hazard Index.

---

**Hazard Index**

The Hazard Index (HI) indicates the potential for adverse health impacts on the same organ or organ system from all compounds emitted from a given facility.

Both short term effects (acute) and long term effects (chronic) are determined.

## Examples

---

The following are examples of how a Hazard Index is treated for health impacts:

- **Long term exposure to either ammonia or chlorine can cause respiratory irritation. Therefore, if a facility emits both of these substances, then the hazard index for each substance is added together.**
- **If a facility emits ammonia and ethylbenzene, ammonia causes respiratory damage, but is not known to cause liver damage; ethylbenzene can cause liver damage but is not known to be a respiratory irritant. Therefore, the hazard indices are not added together.**

## Risks Assessment Results Requiring Notification

### Facilities Required to Notify

---

Based on the results of the risk assessments, facilities are required to notify the affected public when the added risks:

- equal or exceed 10.0 in a million for cancer, and/or
- exceed a Hazard Index of 1.0 and OEHHA determines that the level is significant.

### Facilities That Notified

---

There were no facilities that were required to notify the public of health risks in this review period.

## Public Notification Requirements

### Notification Methods

---

The notification procedure relies primarily on:

- letters sent to individual residences and workplaces
- notices published in newspapers, and
- public meetings.

### Notification Goals

---

The following are the primary goals of the notification procedure:

- notify and inform, yet not alarm, the recipient
- put the risk of health hazards into perspective

**Notification Package Content**

---

The following table describes the elements contained in the notification package:

Item	Maximum Hazard Index
District Letter	The District explains the health risk associated with the facility's emissions based on the approved health risk assessment.
Facility Letter	The facility describes its operations and the results of the health risk assessment and explains what steps the facility has taken to minimize the health risks.
Site Map	Shows the facility in relation to the residences and worksites of the notified public.

**Notification Timelines**

---

Once a facility is notified by the District in writing that its health risk assessment indicates that there is a significant health risk, the facility must:

- within 90 days of the District notice, mail a notification package to the public and the District, and
- within 30 days of notice mailing, hold a public meeting.

**Notification Guidelines**

---

Additional information on the public notification procedure is contained in the *SMAQMD AB2588 Air Toxics "Hot Spots" Significant Risk Thresholds and Public Notification Guidelines (June 1, 1993)*, which can be obtained from the District.

## Risk Reduction Audits and Plans (SB 1731)

### Background

On September 29, 1992, SB1731, an amendment to the Air Toxics Hot Spots Act was signed by the Governor and became law. This law requires districts to review and oversee the implementation of risk reduction plans developed by existing high priority facilities of toxic air emissions.

### Risk Reduction Requirements

The following table shows the requirements and their timelines to implement risk reduction:

Facility Risk	Requirement	Timeline
Cancer risk less than 10.0 in a million or noncancer Hazard Index less than 1.0	1. No risk reduction plan required.	1. N/A
Cancer risk greater than 10.0 in a million or noncancer Hazard Index equal to or more than 1.0	<ol style="list-style-type: none"> <li>1. Prepare risk reduction audit and plan including an implementation schedule.</li> <li>2. Implement all feasible risk reduction measures to the lowest level achievable.</li> <li>3. Reduce cancer risk at all specific receptor locations to less than 10.0 in a million and Hazard Index to less than 1.0.*</li> </ol>	<ol style="list-style-type: none"> <li>1. Within 6 months of determination of significant risk.</li> <li>2. Deadline set in implementation schedule or sooner.</li> <li>3. Within 5 years. **</li> </ol>

\* Non-cancer Hazard Index (HI) greater than 1.0 may be allowed with OEHHA's approval.

\*\* The APCO may grant an extension based on specific findings of up to an additional 5 years.

**Risk  
Reduction  
Plans**

---

No facilities were required to complete a risk reduction plan in this review period.

**Risk Reduction  
Guidance**

---

The California Air Resources Board, in cooperation with representatives from the local districts and industry, has put together various guidelines for facilities to use to comply with the risk reduction audit and plan requirements of SB 1731. These guidelines include:

- Risk Reduction Plan General Guidance (November 1997)
- General Checklist for Risk Reduction Audit and Plan (November 1997)
- Guidelines for the Aerospace Industry Facilities (November 1997)
- Guidelines for the Automobile Refinishing Industry (May 1997)
- Guidelines for Chrome Plating Facilities (November 1997)
- Guidelines for Halogenated Solvents Degreasing Operations (November 1997)
- Guidelines for Dry Cleaning Facilities (in-progress)
- Guidelines for Gasoline Service Station Facilities (November 1997)
- Guidelines for Stationary Diesel Engines (in-progress)

# Section 4

## Air Toxics Hot Spots Reporting

### Overview

---

#### Introduction

This section will explain how facilities become subject to the Hot Spots Act and how those facilities report their air toxic emissions inventories.

---

#### In This Section

This section will cover the following topics:

- Criteria for Adding Facilities to the Hot Spots List.....Page 22
- Criteria for Deleting Facilities from the Hot Spots List.....Page 24
- Reinstating Facilities to the Hot Spots List.....Page 24

### Criteria for Adding Facilities to the Air Toxic Hot Spots List

---

#### Criteria for Adding Facilities

A facility is added to the Air Toxic Hot Spots List when it exceeds 10 tons/year of one of these four criteria pollutants:

- total organic gases
- particulate matter
- nitrogen oxides
- sulfur oxides

---

#### Appendix E

In addition, several classes of facilities emitting less than 10 tons/year of the four criteria pollutants are included in the Hot Spots program. These classes of facilities are listed in Appendix E of the Hot Spots Guidelines.

---

#### New Facilities

Appendix E of the Hot Spots Guidelines lists 31 classes of facilities. The classes of facilities that potentially affect Sacramento are:

- Metal platers using cadmium or chromium.
- Facilities using ethylene oxide for sterilization.
- Facilities that perform degreasing.

## **New Facilities (continued)**

- 
- Facilities using incinerators that burn hazardous, municipal, or biomedical waste (including animal crematoria), or tires.
  - Long term asbestos removal operations (over one year).
  - Facilities where combustion of crude, residual, distillate, or diesel oil occurs in excess of 3,000 gallons/year total at the facility.
  - Facilities using styrene or styrene compounds where emissions exceed 1,000 pounds/year of styrene or styrene compounds.
  - Facilities using methylene chloride for paint or coating removal, where usage of methylene chloride exceeds 6 gallons/year.
  - Facilities that have received written notice from the District that the facility's emissions are or will be included in an industrywide emission inventory prepared by the District in accordance with Health and Safety Code Section 44323.
  - Crop preparation services for market, if fumigation is performed using ethylene oxide, propylene, or methyl bromide.
  - Construction sand and gravel mining, if asphalt products are also used or produced at the facility.
  - Fiberglass and various fiberglass materials and products manufacturing facilities within SICs 2221 and 3229.
  - Printing and publishing including print shops and miscellaneous commercial printing.
  - Chemicals and allied products manufacturing.
  - Miscellaneous plating, polishing, coating, engraving, and allied services, if using hexavalent chromium, nickel, or cadmium.
  - Wastewater treatment facilities (including publicly owned treatment works, or POTWs).
  - Refuse systems, where landfill gas emissions of vinyl chloride exceed 8.5 pounds/year.
  - Petroleum bulk stations and terminals and related wholesalers.
  - Auto body shops (including new and used car dealers where surface coating occurs).
  - Facilities where any retail sale of gasoline occurs.
  - Dry cleaners using perchloroethylene.
  - Funeral services with crematories.
  - Medical services, hospitals, and related facilities, if formaldehyde emissions exceed 110 pounds/year, or if sterilization occurs as described under "Any SIC" for "Facilities using ethylene oxide for sterilization".

## Criteria for Deleting Facilities from the Air Toxic Hot Spots List

### **Emissions Decrease Below 10 TPY**

---

A facility may be deleted from the Air Toxic Hot Spots List by the District if the facility emissions of any one of the four criteria pollutants decrease below 10 tons/year (cumulatively), if the District determines that:

- The emission reductions are permanent and enforceable,
- The facility poses no significant risk to public health, and
- The facility is not included in any class listed in Appendix E of the Hot Spots Guidelines.

### **Facilities Removed from District Surveys**

---

A facility may be removed from a district's toxic use or toxics air emission survey, inventory, or report and, therefore, deleted from the Air Toxic Hot Spots list if the facility meets the following criteria:

- The facility does not trigger any of the other conditions for inclusion on the Air Toxics "Hot Spots" list, and
- The facility poses no significant risk to public health.

### **Facilities No Longer on Appendix E**

---

The District may remove a facility that emits less than 10 tons/year of criteria pollutants (cumulatively) and is no longer included in an "Any SIC" Class Description listed in Appendix E of the Hot Spots Guidelines from the Air Toxic Hot Spots list if the facility meets all of the following criteria:

- The facility does not satisfy any of the other conditions for inclusion on the Air Toxics "Hot Spots" list,
- The process listed in Appendix E of the "Hot Spots" Guidelines is discontinued permanently, and
- The facility poses no significant risk to public health.

## Reinstating Facilities to the Air Toxic "Hot Spots" List

### **Reinstatement**

---

If at any time a facility ceases to satisfy any of the criteria specified for deletion from the Air Toxic Hot Spots List, the facility is again subject to the regulations, including update requirements.

# Section 5

## Airborne Toxic Control Measures

### Overview

#### Introduction

---

Various control measures have been or are being developed to control toxic emissions. As the results of the Air Toxics Hot Spots Act are received and analyzed, other specific control measures to control toxic emissions should be developed.

#### Current Rules

---

Current District rules regarding toxics are:

- Rule 902 – Asbestos
- Rule 903 – Mercury
- Rule 904 – Air Toxics Control Measures

#### Airborne Toxic Control Measures

---

Under the toxic air contaminant identification and control program, CARB has developed Airborne Toxic Control Measures (ATCMs) to control toxic air emissions from specific processes. In 1993, legislation was enacted to allow districts to “implement and enforce” any ATCM approved and adopted by CARB without the lengthy process of local rule adoption.

The ATCMs which have been adopted by the District under Rule 904 – Air Toxics Control Measures are:

- Nonvehicular ATCMs
- Benzene from Retail Service Stations
- Hexavalent Chromium and Nickel from Thermal Spraying
- Chromium Plating and Chromic Acid Anodizing Facilities
- Chromate Treated Cooling Towers
- Dioxins from Medical Waste Incinerators
- Asbestos from Construction, Grading, Quarrying, and Surface Mining Operations
- Asbestos from Surfacing Operations
- Toxic Metals from Non-Ferrous Metal Melting
- Ethylene Oxide from Non-Commercial Sterilizers and Aerators and Commercial Sterilizers and Aerators Using Less Than 2,000 Pounds of Ethylene Oxide Per 12 Consecutive Months

**Airborne  
Toxic Control  
Measures  
(continued)**

- 
- Ethylene Oxide from Commercial Sterilizers and Aerators and Commercial Sterilizers and Aerators Using Less Than 2,000 Pounds or More of Ethylene Oxide Per 12 Consecutive Months
  - Perchloroethylene from Dry Cleaning and Water-Repelling Operations
  - Environmental Training Program for Perchloroethylene Dry Cleaning Operations
  - Chlorinated Toxic Air Contaminants from Automotive Maintenance and Repair Activities
  - Hexavalent Chromium and Cadmium from Motor Vehicle and Mobile Equipment Coatings
  - Toxic Air Contaminants from Outdoor Residential Waste Burning
  - Particulate Emissions from Diesel-Fueled Engines – Standards for Nonvehicular Diesel Fuel
  - Stationary Compression Ignition Engines
  - Diesel Particulate Matter from Portable Engines Rated at 50 Horsepower and Greater
  - Particulate Emissions from Diesel-Fueled Engines – Standards for Nonvehicular Diesel Fuel Used in Intrastate Diesel-Electric Locomotives and Harbor Craft
  - Auxiliary Diesel Engines and Diesel- Electric Engines Operated on Ocean-Going Vessels Within California Waters and 24 Nautical Miles of the California Baseline
  - Fuel Sulfur and Other Operational Requirements for Ocean-Going Vessels Within California Waters and 24 Nautical Miles of the California Baseline
  - Commercial Harbor Craft
  - Formaldehyde Emissions from Composite Wood Products

- (A) The facility name and numbers in this table represent the information that was valid at the time that the HRA was finalized.**
- (B) Cancer Risk is expressed as lifetime excess cancer risk in chances per million.**
- (C) Facility was initially screened at >10 in a million residential cancer risk, so a refined site-specific HRA was performed and the results listed herein.**
- (D) McClellan Business Park was initially screened as >10 in a million worker cancer risk, and is currently in the process of performing a refined site-specific HRA.**
