

Attachment C

Analysis of Related Federal Requirements

Health and Safety Code Section 40727.2

Rule 902, Asbestos, applies to asbestos-related activities, including the removal and associated disturbance of asbestos-containing materials, and the storage and disposal of asbestos-containing waste material generated or handled by these activities. Amendments are proposed for Section 404.1(c). This section contains requirements for notifying the District when the completion date for an asbestos removal project will be changed from the date contained in the most recent plan.

The federal Asbestos NESHAP (40 CFR 61 Subpart M) applies to the same asbestos-related activities as does Rule 902. Under the NESHAP, there are no procedures to change the completion date contained in the most recent plan.
